

DICTATOR ZE Door Holder

The DICTATOR ZE door holder keeps the door open in any position desired. It is recommended for doors where it is not necessary to use a mechanical stop for the open position of the door.

The ZE door holder is available in five sizes. The maximum stroke distance is 160 mm and can compensate for very large clearances between the lower edge of the door and the floor. Thanks to a new technique the overall height of the ZE 160 is virtually the same as of the 90 mm stroke model. Due to the integrated spring in the foot of the door holder, the door remains securely in the adjusted position, even with uneven or polished floors.

All metallic parts of the door holder are made of either aluminum or stainless steel, including internal parts. The door holder therefore is ideal for use outdoors and in humid environments.

The solid construction and the casing all of a piece make the DICTATOR ZE door holder very robust and durable.

The standard finish of the door holder is silver. Other finishes are available on request.

Technical Data

Material	casing: aluminum; other parts: stainless steel, plastics
Strokes	25, 60, 75, 90, 160 mm
Finish	silver; other finishes on request
Components included	door holder with fixing screws

Installation

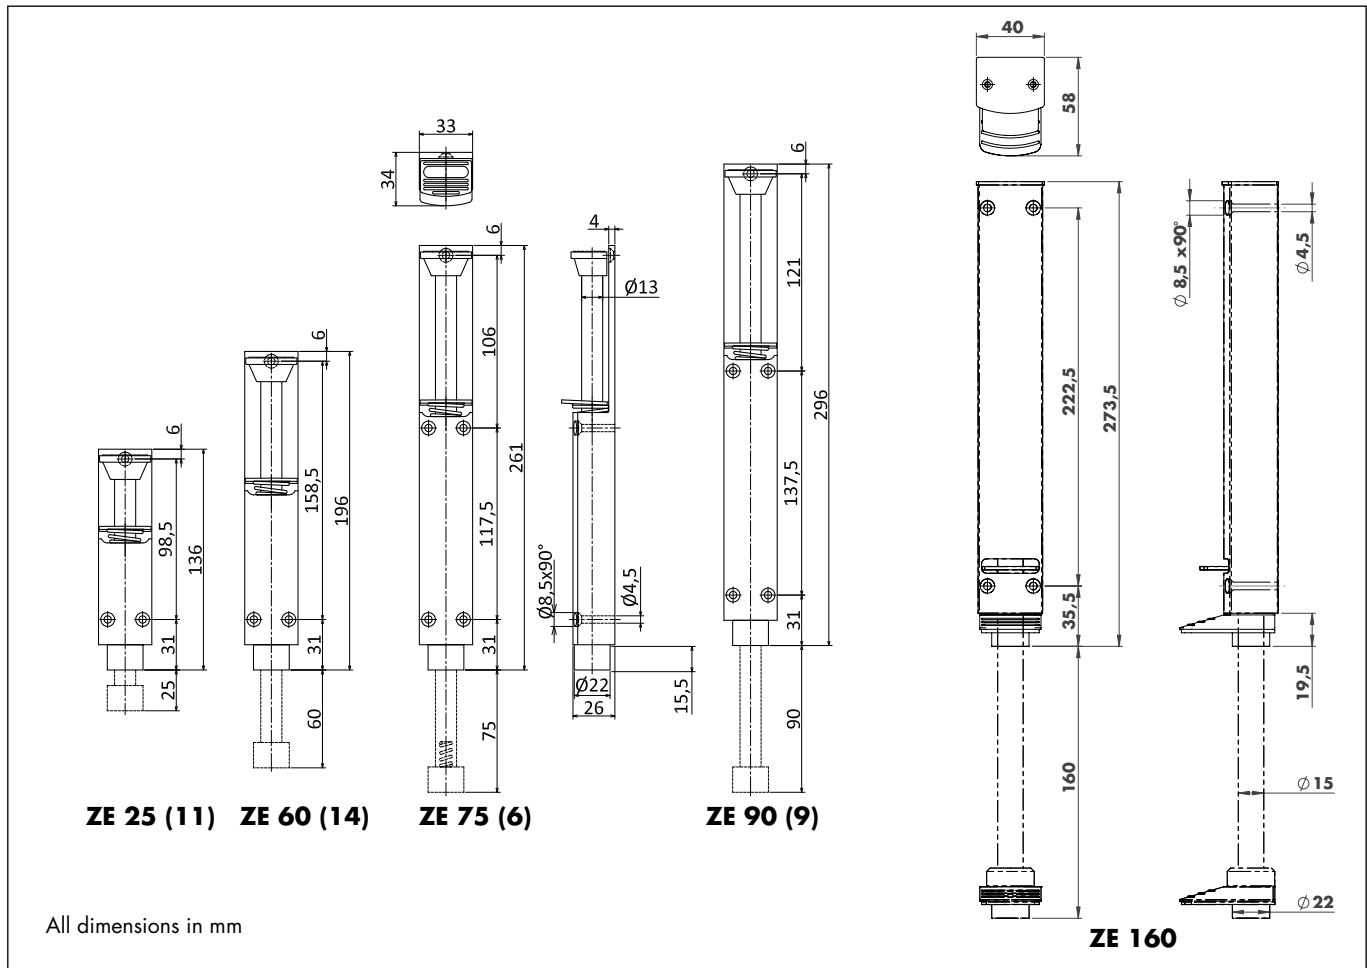

When selecting the mounting position of the door holder, make sure it can easily be reached when the door is open. The door holder DICTATOR ZE should be mounted as near to the closing edge of the door as possible. The foot (ZE 25 - ZE 90: rubber; ZE 160: metal) should be at the same height as the lower edge of the door.

Operation

The door is fixed in the desired position simply by stepping down the piston rod of the door holder. Depending on the model you step either on the rubber knob atop the door holder or the metal foot at the bottom of the casing. A small internal spring presses the foot firmly against the floor and prevents the door from moving.

To release the door you tread the metal plate above the casing or in the bottom of the casing. The piston automatically retreats and the door again is free to move.
